

Optical Tweezers Instrumentation:

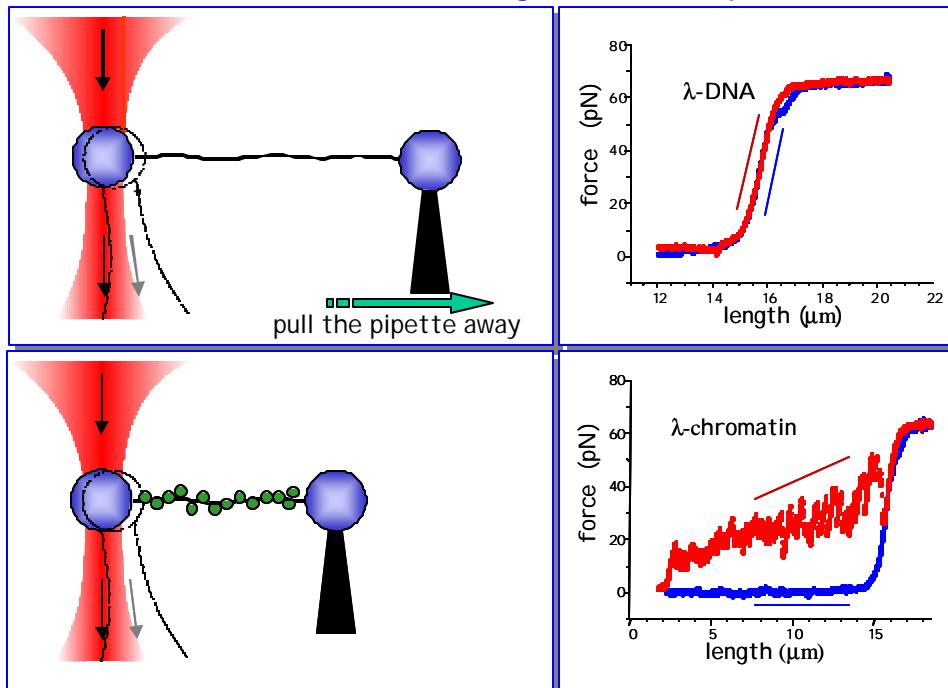

In collaboration with Martin Bennink, Ph.D.,
(http://www.mesaplus.utwente.nl/about_mesa/Martin_Bennink.doc) of the University of Twente, The Netherlands, we have used optical tweezers to study chromatin dynamics.

Optical tweezers

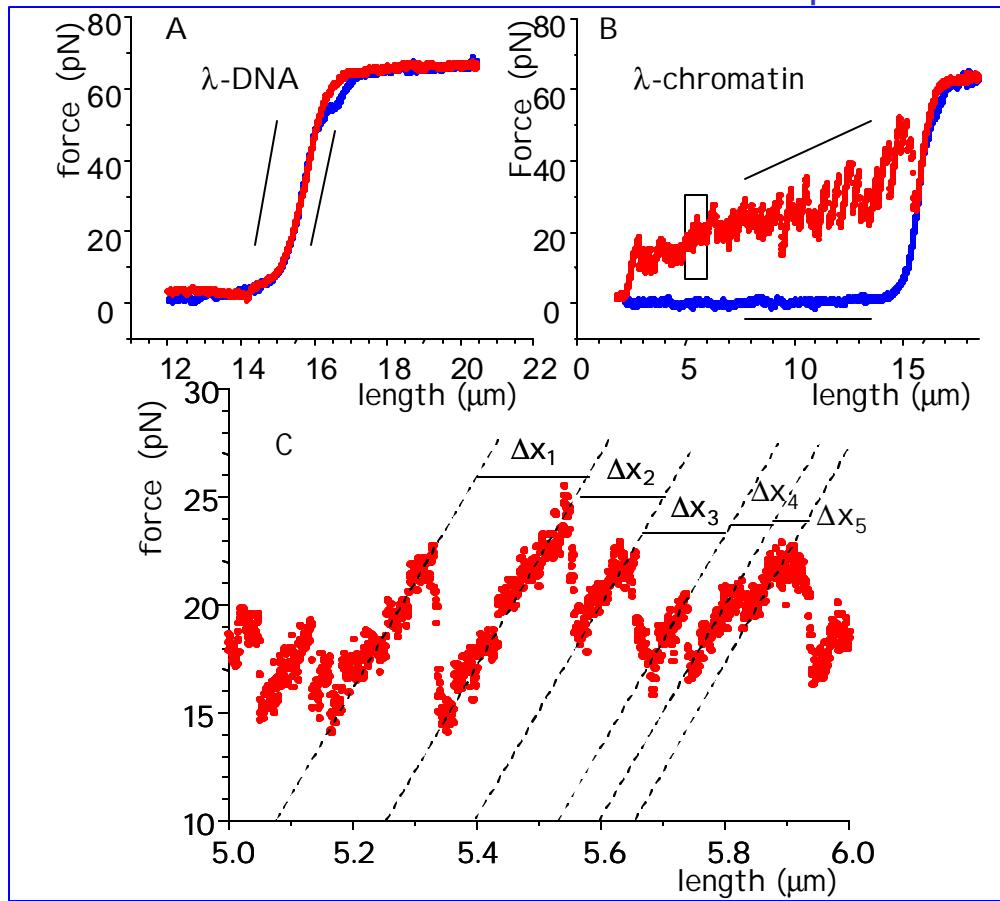

Using this instrument, we were the first to measure individual nucleosomal strength in a fiber context.

DNA and chromatin stretching with laser optical tweezers

Pulling apart a single *X. laevis* extract-assembled λ -chromatin fiber reveals discrete disruption events

We are continuing these experiments in collaboration with Martin to study chromatin dynamics.
